

## Lead Lined Drywall and Plywood

Ultraray's lead is well suited to a great many installation applications due to its versatility, easy fabrication and availability in a variety of forms. There are a number of methods of applying lead for effective radiation protection: Sheet Lead, Lead Brick, Leaded Glass, and a variety of lead lined common building materials, such as leaded drywall & leaded plywood.

Ultraray's Sheet Lead, with the highest possible lead purity of 99.5% or higher, is used in our Lead Lined Drywall and Plywood.

Ultraray provides standard 1/2" or 5/8" drywall adhesive bonded to lead of desired thickness to suit our client's needs. We also offer specialty drywall options: Fire-rated, Mold/Moisture-resistant, and/or Impact-resistant boards. When the lead shielding exceeds 1/8" in thickness,
