

## L-Block Shields

L-Block shields provide protection while working with low and high energy gamma emitting radionuclides.

L-Block shields are available with front shielding from 0.5 to 2.5 inches thick and a selection of lead-glass window sizes. All lead-glass windows have a density of 5.2 g/cm<sup>3</sup>. All L-Block shields are encased in stainless steel. The Model 5-2-2-161616-8-DC shield features a cut-out for the dose calibrator shield.

- Any thickness of lead
- Any size or thickness lead glass window
- Modular, No special lifting equipment required
- Custom designs available
