

Lead Lined Doors & Windows

A premium line of lead-lined metal, plastic laminate (p-lam), or veneer doors and hollow metal seamless frames that are designed and manufactured with the highest quality materials and craftsmanship to match most architectural designs. Frames and doors are manufactured to support the extra weight that the lead sheet imposes on them without compromising their appearance. Also available are knock-down style frames that are manufactured for easy insertion into existing walls. However, we recommend the installation of seamless one-piece frames for maximum support and protection.
