Shielded Generator Containment Cabinets

Ultraray Radiation Protection, Inc. offers Shielded Generator Containment Cabinets to safely shield generators in a nuclear pharmacy.

The cabinet has two sliding doors on top. The cabinet is constructed of 0.125" steel and the generator containment area is lined with 0.5" lead on all sides and the top and bottom. Underneath the containment area there is a storage shelf that is available with or without doors. The interior of the cabinet is painted and the exterior is covered with stainless steel. The cabinet is available with or without four heavy duty casters.
