
LEAD CURTAINS

Ultraray Radiation Protection produces protective Lead Curtains for various applications. Tailored to our client's specifications, we offer several options for your needs. Our Lead Curtains may be used for shielding patients, employees and equipment from unnecessary radiation exposure.

Curtains are ideal for areas where secondary or low-level radiation is present. Optional hardware (track and trolleys) and grommets are available for doorway or room divider curtains. Quick and easy installation and convenience of open/close allows effective partition of the space without crowding the room. Our Lead Blankets may be used for shielding patients, employees and equipment from unnecessary radiation exposure.

Available in many colours in both nylon or waterproof vinyl-coverings, Lead Curtains and Blankets offer protection levels from 0.5mm to 2.0mm lead equivalency. Accessories such as velcro, buckles, rings or strap fasteners can be attached to connect multiple curtains or secure blankets around the patient. We offer other options (logos, embroidery, pockets and screening) to meet your requirements.

EXAMPLES OF USE

- Uranium Shielding
- Skid Covers
- Patient Isolation
- Emergency Response Shielding
- Manufacturing Bi-Product Shielding i.e. Cesium, Radon
